Delivery date: **21 July 2026**

Includes 1 month free service & review period - valid until **21 August 2026**

1. Project Summary

BHELA - The Haor Exclusive is a custom WordPress booking platform built for a premium six-cabin houseboat operating on Tanguar Haor, Sunamganj, Bangladesh. The platform replaces phone-only and social-media-only booking with a professional website that takes bookings around the clock, prices them automatically, issues invoices, and gives the owner a single dashboard to manage the entire operation.

The system is delivered as two purpose-built components - a bespoke theme and a booking engine plugin - written specifically for this business. No page builder, no rented platform, and no per-booking commission. The client owns the source code outright.

Project	BHELA - The Haor Exclusive : Custom WordPress Booking Platform
Live website	bhelahouseboat.com
Developer	3s-Soft - Jashedul Islam Shaun, Founder (3s-soft.com)
Client	KeyToBD - Kaisar Hamid Apon, Owner
Delivery date	21 July 2026
Free service until	21 August 2026 (see section 6)
Version at delivery	Theme v2.15.0 Booking Engine v2.15.0
Version now	Theme v2.29.1 Booking Engine v2.29.1 (see Addendum A)
Post-delivery development	USD 250.00 - new modules beyond original scope
Revised total	USD 450.00
Components	BHELA Theme v2.15.0 BHELA Booking Engine Plugin v2.15.0
Document ref	3SS-BHELA-DEL-2026-07

2. Delivered Features

The following capabilities are complete, tested and live.

2.1 Website & Design

Capability	What it does
Custom design	Bespoke "Midnight Monsoon" dark-teal luxury design system built for this brand - not a purchased template.
Complete page set	Home, Cabins & Rates, Trip Schedule, Food Menu, Gallery, FAQ, Booking Policies, Book Now, Contact and Blog - created automatically on activation.
Bangla-first content	The entire guest-facing experience is written in Bangla, with English keywords where useful.
Mobile-first	Fully responsive with a dedicated mobile action bar, touch-friendly navigation and optimised mobile booking flow.
Editable content	Five Customizer panels let the owner change contact details, homepage text, all photos, tracking IDs and custom code - without a developer.

Capability	What it does
Contact page & form	A ready contact page with quick-contact cards, address and hours, social icons and a contact form that emails the owner.
Page-builder ready	Elementor-compatible: any page can be rebuilt visually later without breaking the theme.

2.2 Booking Engine

Capability	What it does
Owner dashboard	A single overview screen: bookings by status, revenue and money collected, upcoming trips, recent activity, a setup checklist and one-click actions.
Booking wizard	Guided multi-step form with live price calculation as the guest selects dates, cabins and guests.
Six-cabin inventory	Five cabin types across six cabins, each with its own per-person rate and sharing capacity.
Smart pricing	Automatic weekday, weekend and holiday rates with a weekday discount of up to 20%.
Children pricing	Applied automatically: ages 9+ full rate; ages 4-8 a flat per-child fee (default Tk 5,000, no weekday discount); ages 0-4 free.
Live availability	Availability updates itself the moment a booking is confirmed - every manager and the public schedule see the same live count, which prevents overbooking.
Booking management	Full admin screen for every booking, plus manual entry for phone and walk-in guests.
Status workflow	Pending, Advance Paid, Confirmed, Completed and Cancelled - with automatic guest notification on confirmation.
Guest self-service	Guests can track their own booking status using their phone number or email address.
Discount panel	Percentage, flat or custom counter-offer pricing for negotiated bookings.
Trip calendar	Departure schedule with automatic start/end dates, labels and duration, a per-trip holiday toggle, booked-cabin counts and automatic "Full Booked" status.
Photo gallery	Category-filtered gallery with one-click bulk upload of many photos at once.
Guest reviews	Star-rated reviews managed from the dashboard and displayed on the website.
Activity log	A plain-language record of bookings, emails, SMS, trip and settings changes so the owner can confirm everything worked.
WhatsApp integration	One-tap WhatsApp contact with the booking details pre-filled.

2.3 Invoicing & Notifications

Capability	What it does
Automatic invoices	Every booking generates a branded, print-ready invoice with a per-person cost breakdown, advance, paid and due amounts.
Secure invoice links	Each invoice link carries a private signed key, so it is safe to send by WhatsApp or email.
Payment details	bKash, Nagad, bank transfer and QR details are pulled from settings into every invoice.
Email notifications	Automatic email to the owner on every new booking, and to the guest on request and on confirmation - each individually switchable.
Email controls	Custom sender name, reply-to address, owner notification address and a one-click test email.
SMS notifications	Optional SMS on new booking and status change, with editable Bangla templates and auto-filled placeholders.
Any SMS provider	BulkSMSBD preset plus a custom gateway option - a different provider can be configured without any code change.

2.4 Search Engine Optimisation & Performance

Capability	What it does
On-page SEO	Per-page meta descriptions, Open Graph and Twitter cards, canonical URLs and correct Bangla language signals.
Structured data	A connected JSON-LD graph - Organization, Website, Local Business, Tourist Attraction, Breadcrumbs, Articles, FAQ and aggregate guest rating.
Search visibility	XML sitemap and robots.txt configured, with Google Search Console set up and the sitemap submitted.
Speed optimisation	Theme image payload reduced by approximately 74%, font preconnect, lazy loading and layout-shift protection.
Lean codebase	Single stylesheet, no jQuery and no page-builder bloat - fast by construction on mobile networks.
Content blog	A ready travel blog with categories, tags, related posts, reading time and a booking call-to-action on every article.

2.5 Analytics, Custom Code & Security

Capability	What it does
Analytics ready	Google Analytics 4 and Meta (Facebook) Pixel enabled by pasting the ID only. The owner's own admin visits are excluded from statistics.

Capability	What it does
Custom code panel	Three boxes to inject any code into the page head, immediately after the body tag, or in the footer - no theme file editing required.
Form protection	Hidden honeypot field and per-visitor rate limiting stop automated spam submissions.
Request verification	All form and admin actions are protected with WordPress security tokens and capability checks.
Private guest data	Booking records are stored privately and are not exposed through any public URL or API.
Credential safety	API keys are stored masked and are never displayed or written to logs.

3. Technical Specification

Platform	WordPress (custom theme and custom plugin)
Requirements	WordPress 6.0 or newer, PHP 8.0 or newer
BHELA Theme	Version 2.15.0 - design, pages, blog, SEO, analytics, custom code, contact page
Booking Engine	Version 2.15.0 - dashboard, bookings, pricing, invoices, trips, gallery, reviews, activity log, email and SMS
Front-end	Vanilla JavaScript and CSS - no jQuery, no build step, no external framework
Source control	Full Git history hosted on GitHub, released with version tags
Third-party services	FluentSMTP for email delivery; SMS gateway optional

4. Deliverables & Handover

The following items are handed over to the client on delivery:

- **Complete source code** for the custom theme and booking engine plugin, with full version history on GitHub.
- **Installable packages** - theme and plugin ZIP files ready for deployment to any WordPress host.
- **Live, configured website** at bhelahouseboat.com with all pages, menus and settings in place.
- **Owner's Manual** - a plain-language, Bangla-friendly guide covering every day-to-day task: bookings, invoices, rates, availability, blog, email, SMS, analytics and settings.
- **Project overview documentation** describing the platform, its value and its architecture.
- **Production go-live checklist** covering caching, HTTPS, email deliverability, Search Console and Google Business Profile.
- **Google Analytics 4 and Google Search Console** - both accounts created, verified and connected to the website, with the sitemap submitted to Google.
- **All passwords and login credentials** - WordPress administrator account, hosting control panel, domain registrar, database, Google Analytics, Search Console and any service accounts created for this project are handed over to the client in full.
- **Full ownership** - the client owns the delivered code and all site data outright, with no licence fee, no lock-in and no commission on bookings.

Credentials handover. The client receives every username and password associated with the project. 3s-Soft retains no exclusive access, and the client can transfer the site to any other developer or host at any time.

No recurring cost to 3s-Soft. Once delivered, the platform runs without any subscription or per-booking fee payable to the developer. The client is responsible only for their own hosting, domain and any optional third-party services such as SMS credits.

5. Commercial Terms

Description	Amount
Design, development and delivery of the BHELA custom WordPress booking platform (theme and booking engine), including deployment support and one month of free service as set out in section 6.	USD 200.00
Domain setup, hosting setup, WordPress installation and configuration, plus Google Analytics and Google Search Console setup - see section 5.1.	No charge
Total project price	USD 200.00

Total project price: USD 200.00 (Two Hundred US Dollars). The price is inclusive of everything listed in sections 2 and 4 of this document, and of the one month free service period described in section 6.

5.1 Additional Services Provided Free of Charge

The following work was carried out by 3s-Soft at no cost to the client. It is **not** included in the price above and is listed here at its standard market value so the client can see the full scope of what has been delivered.

Provided free of charge	Standard value
Domain setup and DNS configuration	USD 15.00
Hosting setup and site deployment	USD 25.00
WordPress installation and full configuration	USD 35.00
Google Analytics 4 setup and verification	USD 20.00
Google Search Console setup and sitemap submission	USD 20.00
One month service and support period (section 6)	USD 50.00
Total value received free	USD 165.00

TOTAL VALUE DELIVERED USD 365.00	AMOUNT CHARGED USD 200.00	CLIENT RECEIVES FREE USD 165.00
--	-------------------------------------	---

Any third-party fees payable directly to providers - domain registration, hosting plan and SMS credits - remain the client's own cost and are not part of this document.

6. One Month Free Service & Review Period

A **one month free service and review period** is included with this delivery at no additional cost. It allows the client to use the platform in real operating conditions and raise anything that does not work as intended.

Period	21 July 2026 to 21 August 2026 (one calendar month from delivery)
Cost	Free - included in the project price
Raise an issue via	Direct contact with 3s-Soft (Jashedul Islam Shaun)

PERIOD STARTS
21 July 2026

DEADLINE - FREE SERVICE PERIOD ENDS
21 August 2026

Please report any issue on or before **21 August 2026**. Anything raised within the period is fixed free of charge. After this date the free service period expires and further work is chargeable or arranged by mutual agreement.

6.1 What is covered

- **Any bug or defect found in the delivered scope will be fixed free of charge.** If something in this document does not work as described, 3s-Soft will correct it at no cost.
- Errors in booking calculation, invoices, notifications, availability or any delivered feature.
- Display or layout problems on desktop and mobile devices.
- Configuration assistance and guidance on using the dashboard.
- Minor settings and content adjustments requested by the client.

6.2 What is not covered

- New features or changes beyond the scope delivered in section 2 - these can be quoted separately.
- A redesign or restructure of the website.
- Third-party costs such as hosting, domain renewal, SMS credits or paid plugins.
- Content writing, photography or translation.
- Problems caused by changes made by the client or another party to the code, or by installing third-party plugins that conflict with the platform.

Commitment. During the review period, if the client finds any issue in the delivered platform, 3s-Soft will fix it free of charge. The period ends on **21 August 2026**; after that date continued support and any new development can be arranged by mutual agreement.

Addendum A — Development After Delivery

Period covered: 22 July 2026 to 18 August 2026 · **Document ref:** 3SS-BHELA-ADD-2026-08

The platform was delivered on 21 July 2026 at version v2.15.0. In the four weeks since, it has been developed considerably further at the client's request, and separately corrected wherever something in the original delivery did not behave as documented. Those are two different things commercially, and this addendum keeps them apart.

Section 7 - new modules beyond original scope	Chargeable. USD 250.00
Section 8 - fixes inside the delivered scope	No charge, under the section 6 free service period

Scale of the work. 35 tagged releases, 44 commits, 15 new plugin modules and approximately 23,600 lines of new code across 85 files - taking the platform from v2.15.0 to v2.29.1.

7. New Modules Beyond Original Scope — Chargeable

None of the following appears in section 2 of the original delivery. Each is a new module built after handover.

7.1 Accounting & Financial Control Suite

The largest single addition. The platform now answers *did this trip make money, and did this month?* rather than only *who booked?*

Capability	What it does
Trip Cost Sheets	One sheet per trip covering every cost head - fuel, groceries, meat, fish, gas, jetty, staff transport, electricity and more - each with three payment columns, a remark and spare rows for one-offs. Cost heads are owner-editable, so the list follows the business rather than the code.
Approval workflow	Prepare, Check, Approve - each step stamped with who did it and when . An approved sheet locks: figures can no longer be edited, and an administrator must deliberately unlock it before anything changes.
Expenses	Spending not tied to a trip - advertising, boosting, renovation, one-off purchases - with date, type, amount, payment method, means of verification and remark. Types and payment methods are owner-editable.
Monthly Statement	The month's approved trips as rows, then one deduction line per expense type, then staff payroll, then gross profit. Also cost per person and profit per person, with the three sign-offs carried through. Print and PDF ready.
Yearly Report	Twelve monthly statements rolled up, in financial-year (July to June) or calendar mode, with season totals, margin and the year's expense mix. Built from the monthly statement twelve times, so a yearly figure can never disagree with the month it summarises.

Capability	What it does
Staff roster & payroll	Staff recorded as trip-based, monthly-salaried or both, with per-trip rate, monthly salary and payment account. A salary sheet per month prices trip-based crew automatically from the number of trips that actually ran, and records advances, settlement and adjustments.
Payroll in the bottom line	Gross profit is now trip profit less expenses less payroll. Wages are a real cost and are treated as one.

7.2 Inventory & Asset Register

A complete stock and asset control system - the second major addition.

Capability	What it does
Item register	A permanent record per item: category, sub-category, location, unit, brand, model, serial, supplier, purchase date and bill, warranty, unit value, responsible person, photos. Every item receives a frozen Item ID built from its category (BHELA-KIT-0001) that never changes and is never reused.
Monthly stock sheet	Each month opens on the previous month's closing , automatically. Records what came in, what went out, what was used, lost or scrapped, and splits what is on board by condition: good, repairable, under repair, damaged.
Physical verification	A counted figure per item against the system figure. Any variance must be explained before the month can be closed - a discrepancy is reported, never quietly corrected.
Month close & lock	A closed month is genuinely closed . Its figures cannot be edited through the form, cannot be changed directly in the database, and cannot be deleted - not even by an administrator. Reopening is possible and is itself recorded.
Audit Trail	An append-only record of who changed which figure, what it was before, what it became and why. It has no delete path and no clear button, by design - it is the register's memory, not a log to tidy up.
CSV importer	Four steps - upload, map your columns, dry run, commit. It reads the spreadsheet you already keep rather than demanding a fixed format, tells you what it would do before doing anything, blocks a row it cannot resolve instead of guessing, and is safe to run twice.
Inventory & Asset Reports	Two reports with print and CSV export - consumables by movement and value, assets by location and condition.

7.3 Staff Roles & Access Control

Capability	What it does
Six staff roles	Manager, booking staff, cost preparer, cost checker and storekeeper, alongside the administrator - so office staff, kitchen and store can each be given their own login.
Editable permissions	A Team screen with a checkbox per permission per role, saved from the page. Access is configured by the owner, not hard-coded.
Role-aware admin	Each person sees only the menus they can actually use. A storekeeper sees the store; a cost preparer sees accounts.

7.4 Mobile Verification (OTP)

Capability	What it does
Verified numbers	Optional SMS code on the booking form, so a booking carries a number proven to work. Email fallback, with per-number and per-IP throttles.
One-part messages	Codes are forced into GSM-7 so a verification SMS never silently costs double.
SMS credit on dashboard	Live gateway balance with a low-balance warning, so credit never runs out mid-season unnoticed.

7.5 Operational Reporting & Admin Redesign

Capability	What it does
Trip Report	Every booking for a date or range with advance, due and totals - printable, exportable to CSV, and shareable as a WhatsApp message for the crew.
Admin design system	A single consistent design across every admin screen - headers, summary cards, ledger tables, status pills, print styles - replacing screen-by-screen styling.
Four admin menus	The sidebar had grown to 22 rows under one Bookings menu. It is now four menus grouped by job - Bookings, Accounts, Store, Setup - each hidden from anyone who cannot use it. Old links and bookmarks continue to work.
Full Boat bookings	Whole-boat reservations are bookable from the admin as well as the form, take all six cabins, and now arrive priced automatically at the standard 36-person rate for the owner to adjust after negotiating - instead of arriving blank.

7.6 Guest-Facing Additions

Capability	What it does
Reviews with photos	Guests submit star-rated reviews with trip photos after travelling; the owner moderates them, and approved reviews appear in a carousel on the website.
Booking Guide page	A step-by-step guide for first-time houseboat guests, plus two-level primary navigation to carry the larger page set.
Manageable Spots	The included and optional sightseeing spots are now editable content rather than fixed text.

7.7 Quality Assurance Programme

Not a feature, and the reason the modules above can be trusted with money.

Capability	What it does
Automated test suite	14 test harnesses , run from a single command, covering pricing, the July statement reproduced to the taka, salary, cost sheets, the booking save path, the stock register, every admin screen, colour contrast, front-end behaviour behind a page cache, OTP, the SMS gateway, version consistency and the yearly rollup.

Capability	What it does
What it is for	Every future change is checked against all of it before release. The suite has caught real defects - including several during this period - before they reached the live site.

8. Fixes Inside the Delivered Scope — No Charge

Everything below was corrected **free of charge** under the section 6 free service period, which runs to **21 August 2026**. Listed for completeness, so the client can see what was done.

8.1 Booking, pricing and invoices

- Homepage price estimator corrected until it matched the booking engine exactly
- Weekend rate calculation corrected
- Guest count drift between the form, the admin and the invoice
- Advance amount made owner-owned, with correctly derived percentages
- Invoice discount row, note placeholders, contact details and footer duplication
- Taka symbol rendering fixed everywhere, including print and PDF
- Duplicate WhatsApp numbers and duplicate confirmation emails
- **Day type on invoices** - a booking moved to a weekday kept printing Weekend; the label is now derived when read rather than cached
- **PAID stamp** - a settled invoice now carries a clear paid mark, drawn as an outline so it survives printing with backgrounds switched off

8.2 Availability, mobile and security

- Additive cabin availability (held plus sold), with a manual Booked status honoured across the engine
- Booking form made safe behind a page cache, and the real visitor IP detected correctly behind a CDN so rate limiting cannot bucket every guest together
- Trip schedule invisible on mobile; WhatsApp button intercepting touches on mobile
- Homepage image payload reduced with correctly sized renditions and hero preload
- Staff file-upload capability revoked where it was not needed
- Invoice links marked no-store and noindex, so they cannot be cached or indexed

8.3 Defects found in the new modules and corrected before release

Found by operating the platform with real data rather than test data, and fixed at no charge:

- Stock valuation reading zero permanently, because the first save froze each item's unit value at zero
- A newly opened stock month reporting itself empty, above rows that clearly were not
- A closed stock month becoming unreachable after a maintenance routine cleared its index
- A cleared trips field paying a crew member for no trips, and under-deducting that month's payroll
- Hiring a staff member retroactively changing the payroll of months already paid
- Clicking Bookings opening the dashboard instead of the booking list

8A. Revised Commercial Terms

Description	Amount
Original project - design, development and delivery of the BHELA platform, per sections 2, 4 and 5	USD 200.00
Post-delivery development - new modules beyond original scope, per section 7	USD 250.00
Fixes inside the delivered scope, per section 8	No charge

Revised total

USD 450.00

Post-delivery development: USD 250.00 (Two Hundred and Fifty US Dollars). This covers every module in section 7 - the accounting and financial control suite, the inventory and asset register, staff roles and access control, mobile verification, the operational reporting and admin redesign, the guest-facing additions, and the automated test suite.

For context, the accounting suite and the inventory register would each ordinarily be quoted as a project in its own right. They are charged here as a single continuation of the original engagement.

Original project	Post-delivery development	Revised total
USD 200.00	USD 250.00	USD 450.00

Section 5.1 of this document still applies: domain setup, hosting setup, WordPress installation and configuration, Google Analytics and Google Search Console setup were all provided free of charge, at a standard value of USD 165.00. Third-party fees payable directly to providers - domain registration, hosting and SMS credits - remain the client's own cost and are not part of this document.

Support on the new modules. Defects found in the section 7 modules were corrected free of charge as they were built, and that continues to the end of the original free service period on **21 August 2026**. Support and development after that date is arranged by mutual agreement, as set out in section 6.

9. Acceptance & Sign-off

By signing below, both parties confirm that the platform described in this document has been delivered and accepted, and that the commercial and support terms set out in sections 5, 6, 7, 8 and 8A - including Addendum A and the revised total of **USD 450.00** - are agreed.
